

Advance Payment for Microsoft Dynamics 365 Business Central

Is your financial accounting department faced with the challenge of automatically controlling advance and final invoices, taking into consideration the accounting peculiarities? Save the time spent on the manual processing of invoices from now on.

The **KUMAVISION app "Advance Payment"** enables you to transparently plan, create and manage advance payment invoices in the sales and purchasing area. Based on sales orders, jobs or purchase orders, all relevant documents and postings can be created and tracked via so-called advance payment plans. The app is fully integrated into the standard processes and advance payment invoices can flow directly into the dunning process and payment transactions, for example.

Highlights & Benefits

- Advance payment plans with warnings in case of overplanning, invoice generation at the touch of a button and the current payment status
- Automatic consideration of the tax treatment of unrealised advance payments
- Display of previous advance payments when generating final invoices
- Credit notes for advance payment invoices
- Control instruments for various evaluations

With the Advance Payment app, you accelerate and optimise all processes related to advance payments in sales and purchasing. In addition, you ensure that the legal requirements are implemented correctly and reliably.
